

Frontend Web Developer

5/6/2020 - 8/21/2020

Columbus, OH

As web developer you will be tasked with helping evolve and improve the Surety website so that it better communicates the Surety message and offers the most functional and frictionless experience to customers, and potential customers. You will gain experience enhancing a modern, eCommerce website and an active community forum. Knowledge of PHP7, JavaScript and Sass/CSS is a plus.

Example work activities include

- Update website to improve image and customer experience
- Build interactive features to help customers manage accounts
- Collaborate with development team on technical design & planning
- Participate in agile process with lean project team

Enjoy a combination of on-site and remote work. You will be required to be on-site frequently so that you can sufficiently absorb the Surety strategy and get lots of iterative feedback. However, much of the execution can be performed remotely as you see fit. We use lean & agile methodology, move quickly and don't hesitate to pivot when it's the right thing to do. Bureaucrats need not apply. ;)

Surety is a connected home services provider with an focus on modern home security and privacy. We are disrupting the traditional home security industry by offering a better customer experience at a dramatically lower price for modern, web shoppers. Our core values are being lean, transparent, and value driven in an industry that's historically been fat, misleading and shrouded in secrecy. Help us pull back the curtain, delight customers, and deliver smart home security the way it should be.
